BE SURE of VAT structure & configuration

By focusing on accuracy of master data that relates to VAT setup and the ERP environment of the company. It allows you to gain insight into items such as the tax coding setup.

BE SURE of transactional data quality

Test various aspects of the transactional data with specific reference to VAT rules and the implementation of the master data tables and rules.

BE SURE of VAT submission readiness

Similar to the transactional data quality module, all transactional data is quality tested but a specific focus is placed on those items that ultimately populate and affect line items in the VAT201.

BE SURE of VAT compliance & documentation

This module was developed to performance relevant compliance checks and ensure accuracy and completeness of VAT documentation on a monthly basis prior to the submission of the VAT return.

BE SURE of VAT timing

Time of VAT supply rules for both Input VAT and Output VAT are specifically analysed in this module.
